Gearóid Ó Treasaigh

London, UK · gearoid@gearoid.eu · https://gearoid.eu · https://www.linkedin.com/in/gearoid-o-treasaigh · https://github.com/gotreasa

Summary

Gearóid Ó Treasaigh is a software craftsmanship coach. He works inside engineering organisations, moving teams towards test-driven development, continuous delivery and clean code, and coaching the managers and product people alongside them, because a practice change that does not survive contact with product and management does not survive at all. Fifteen years at IBM as a developer, a lead and an architect preceded coaching full time. He runs Untangled Code, is a partner at BriX Consulting, and is instructor and embedded coach on an Extreme Programming upskilling programme inside a Fortune 100 insurer.

Experience

Enterprise Technical Instructor, BriX Consulting s.r.o. May 2024 – Present

- Instructor and embedded coach on an Extreme Programming and digital product upskilling programme inside a Fortune 100 insurance company. Personally taught around 600 students, part of the over 3,000 engineers and product managers the programme has reached across three continents.
- Teach cohorts of 13 to 50 across two weeks of training and six weeks of embedded coaching, and coach three levels of leadership above the teams in both engineering and product. Coach teams working in COBOL, introducing cross-language testing to validate COBOL behaviour.

Software Craftsmanship Coach, Nederlandse Spoorwegen January 2024 – March 2024

- Delivered the Software Craftsmanship Dojo to one team of 15 over three months, taking 13 of the 15 to certified Yellow Belt: a solo two-hour timeboxed delivery under strict red-green-refactor at full coverage. Took a train driver through the same programme as the developers, from not believing he could write code to doing it alongside them.

Founder & Technical Coach, Untangled Code Ltd December 2023 – Present

- Founded and run the practice through which all coaching and consulting engagements are delivered, sub-contracting to BriX Consulting and running concurrently rather than in sequence.
- Contributed roughly 100 commits and 20 pull requests (17 merged) to nWave, an AI-agent delivery methodology, on packaging correctness, continuous integration, hooks and test infrastructure, including a static-analysis gate that closed a bug class shipped broken across five releases.

Technical Agile Coach & Partner, BriX Consulting s.r.o. December 2023 – Present

- Partner and technical agile coach delivering client engagements including a Fortune 100 insurer and Nederlandse Spoorwegen, one renewed by the firm every six months since January 2024. Interview and headhunt for the firm against contracts not yet won.

Software Craftsmanship Coach, IBM January 2022 – June 2023

- Led a software craftsmanship transformation across 1,000 developers in London, Brazil and Mexico, and presented its results to two CTOs and a vice president.
- Took teams to green belt on IBM's XP Farm scale, a graded certification assessed on delivered work rather than self-report, moving them through test-driven, then acceptance-test-driven, then behaviour-driven development while building CI/CD to containerised pipelines.

Implementation Architect & Software Engineering Lead (PRM Salesforce), IBM October 2020 – December 2021

- Architected NodeJS microservices for partner relationship management (PRM) on Salesforce with final say over a delivery team of nine, and led an API layer speaking to both Salesforce and SugarCRM that made the migration incremental rather than a cutover: 200k users across 10k partner organisations and 11 billion USD of transactions.

JavaScript Full Stack Development Lead, then Senior Lead (My Sales Activity), IBM January 2017 – October 2020

- Led development of My Sales Activity, a single-page application on NodeJS, Express, AngularJS and Cloudant, strangling Siebel piece by piece while it stayed live on a platform serving 10k partner organisations and 200k users. Promoted to Senior and relocated from Dublin to London, growing from a squad of 6 to tribe lead for 18 developers, and coached 3 people into their first squad lead roles.

- Led the tribe rewriting deal registration on React and NodeJS, collapsing an opportunity submission, a deal registration and a submission per incentive into one form and taking a partner from 30 minutes down to 5. Met a fixed February deadline to move the customer relationship management system behind both platforms from on-premise SugarCRM to cloud, then migrated deployment to OpenShift.
- Cut the lead time on a new incentive from six months to a couple of days by moving change in-house, cutting development cost by almost 90%. Built continuous deployment on Jenkins, Travis, Docker and Cloud Foundry, and delivered code retreats teaching test-driven development.

DevOps & Web Development Lead (SalesConnect), IBM March 2011 – December 2016

- Led web development on SalesConnect, IBM's CRM for its own sales force, across a team of 3 to 8 developers, and took deployment from 72 hours to two hours by orchestrating the whole application through IBM UrbanCode Deploy, freeing 2 people who had worked deployment weekends and saving up to 2,000 hours a year, on the first project in IBM's CIO production portfolio to deploy through it.

Graduate, then Web Application Developer (XPages, Connections), IBM June 2008 – March 2011

Projects

gSmith, Curriculum authoring and review toolkit, Claude Code 2024 – Present

- Architected a seven-agent authoring and review toolkit encoding the client's learning platform contract and an instructional-design rubric. Held to the standard it enforces: 189 tests, 100% coverage, an 88.5% mutation-kill gate. Used by 13 authors; 14 modules shipped.

Vita, CV, cover-letter and LinkedIn architect, Claude Code 2026 – Present

- Built an evidence-based application toolkit for contractors at the BriX partnership: two agents, eleven skills, and a research corpus in which every rule is marked as evidenced, convention or contested. 192 tests and 682 assertions, all passing. Four beta users.

Skills

Practices: Test-driven development, ATDD, BDD, continuous delivery, clean code, pair programming, Extreme Programming, team and leadership coaching, curriculum design, code retreats

Languages and frameworks: JavaScript, Python, Java, NodeJS, Express, AngularJS, Dojo, Cloudant

Delivery and systems: Jenkins, Travis, Docker, Cloud Foundry, IBM Cloud, IBM UrbanCode Deploy, Salesforce, SugarCRM, Siebel

Education

Bachelor of Science (Honours) in Computing Studies, University of Galway 2004 – 2008

- First class honours (1:1). Thesis: Porting pkgsrc from NetBSD to MINIX.

Certifications

Agile Coaching · Agile Team Facilitation · XP Farm XP Coach · IBM Career Coach · Blue Core Coaching Supervisor · IBM Recognized Teacher/Educator

Awards

All IBM. Outstanding Technical Achievement Award, Born in the Cloud (2017) · Manager's Choice Award (2017) · Outstanding Technical Achievement Award, SalesConnect deployment automation and uCommand (2014) · People's Innovation Choice, Connections Toolbar (2014) · Leadership Excellence Award (2013)

Available for

Gearóid works freelance across four kinds of engagement: coaching a development team towards software craftsmanship, coaching a DevOps team on its pipeline, consulting on delivery in JavaScript, TypeScript or Python, and consulting on pipeline and platform work. An appointment can be booked directly.
